## Editorial

Happy New Year! Welcome to this new issue of our journal!

Let me remind you that if your research is about the role of quantum consciousness in human affairs, our journal is most suitable for you, so consider us for the publication of your research.

In this issue:

Karla Carvalhal explores the effect of quantum inspired integrative practices on human subjects and illustrates her research with an illuminating case history.

Rachel Stricker's article breaks new ground in the application of quantum science to the physiology of organs along the gut-brain axis.

Leda Turai's investigation of dreams is a tour de force on the subject.

Gary Montemayor proposes and explores a new take on the theory of the five experiential bodies of the human beings (physical, vital, mental, supramental, and bliss) emphasizing especially the role of the mental body.

Imogen Salzman's article throws new light on our understanding of trauma.

Medhi Zaeri Amirani looks at cosmology from a primacy of consciousness point of view.

Happy reading!

To end, let me remind you: some of the authors in this issue are our own PhD students. Their erudite articles will give you some idea of the kind of research our students are engaged in.

Take a look at our transformative programs of applied quantum science at [www.amitgoswami.org](http://www.amitgoswami.org).

Respectfully,

**Valentina R. Onisor, MD, PhD**

**Editor-in-Chief**
